

it was simple to solve the OSX problem:

- 1) copy the SPL app into a folder named Dateq
- 2) move that folder "Dateq" in Application folder
- 3) right click the application and choose "Show application content" (or something like that, I'm on an italian version of OSX)

- 4) open "Contents" then open "MacOS" and copy there the license:

- 5) it works!
