DDA-120DT
Quick Guide

Troubleshooting

If the device cannot be detected or connected to, please check the following:
1. Network cable: Ensure correct wire sequence and no breakage.
2. Network segment: Confirm the computer and device are on the same segment.
If there is no signal output from the device, please check the following:
1. Network cable: Ensure proper connection and no poor contact.
2. Output ports: Verify correct connection, wire sequence and no poor contact.
3. Dante subscription: Check if it is subscribed and connected properly.
4. Output signal: Ensure it is not excessively strong, which may trigger the device's protection mechanism.
